

RECEIVERS

**STANDARD RECEIVERS**

All Mico multi-point locks are supplied with receivers for the top, bottom and third point locking bolts which are fitted to the doorframe. The top receiver engages with the Mico unit and as the door closes the locking bolts are simultaneously released into their respective receivers. These receivers are self handing.

Mico single point push pads and latches are supplied with a self handing three sided strike to accept the modular bevel latch.

**RIM MOUNTED RECEIVERS**

Rim fixed receivers are available for use in situations where the door and frame are flush and do not allow the locking bolts to enter into the doorframe. These receivers are self handing.

**DUST PROOF RECEIVERS**

A dust proof floor receiver is available. This receiver is fitted with a spring loaded cover which reduces the risk of grit or dirt restricting the bottom bolt from fully engaging. A dust cover is included to enable periodic cleaning maintenance.
