

**SURFACE MOUNTED PANIC BOLT WITH FULL WIDTH PUSH PLATE**

Drawing Not to Scale. Drawing shows outward opening unit.

**OPERATION**

Pressing the full width push plate, which has the instruction PUSH TO OPEN on the point of use, immediately retracts the locking shoots at the top, bottom and on the leading edge of the door. This emergency panic exit device allows for fast, single action operation to open the door. The unique light action automatic bolting upon door closure is fitted as standard. The independently sprung bolts are steel, non-tapered with a 23mm throw, offering a high level of security without compromising on safety.

**APPLICATIONS**

Suitable for use in areas where members of the public, in the event of a panic situation may not be familiar with the operation of the emergency panic exit device. The light single action ease of operation makes the MICO three point ideal for escape doors requiring a higher level of security. Examples include local authorities, retail stores, retail parks, computer rooms, factories and schools. Conforms to all the requirements of BS EN 1125 Certified to CE No. 37601321A

**DIMENSIONS**

Standard height of 2150mm (can be reduced on site to suit)  
Extension kits also available, increasing the height to 3000mm

Non-standard height single piece units readily available to separate instructions.

Push plate width = 800mm (suitable for door widths 925mm - 1300mm)

Other widths readily available to order (push plate can be cut to size on site or in a workshop)

Mechanism zinc plated steel. External housings are aluminium.
