

SAFETY AND SECURITY WITH STYLE

MICO 942-3 BDO

SURFACE MOUNTED 3 POINT LOCKING WITH BREAK DOME LEVER HANDLE

OPERATION

Operating the lever handle immediately retracts the locking shoots at the top, bottom and on the leading edge of the door. The lever is fitted with a green plastic dome which is broken off when the handle is operated, deterring casual use and providing a clear visual indication that the door has been opened. This multi-point exit device allows for fast, single action operation to open the door. The unique light action automatic bolting upon door closure is fitted as standard. The independently sprung bolts are steel, non-tapered with a 23mm throw. The dome is fitted using replaceable plastic breakpins. This provides a high level of security without compromising on safety.

APPLICATIONS

Suitable for use in areas where occupants are likely to be familiar with the operation of the exit device. The light single action, ease of operation makes the MICO three point ideal for single escape doors requiring a higher level of security. The door should not be used as a normal regular pass door. Examples include health centres, surgeries, plant rooms and store rooms.

Suitable for inward or outward opening doors

Drawing Not to Scale.

DIMENSIONS

Standard height of 2150mm (can be reduced on site to suit)
 Extension kits also available, increasing the height to 3000mm
 Non standard height single piece units readily available to separate instructions.
 Mechanism zinc plated steel. External housings are aluminium.
